I, the owner, would like to request permission to use plug-in level 1 charging (trickle charging) for my electric vehicle from an HOA outlet in my garage, unit # \_\_\_\_\_.

1. I understand that I may only use the level 1 charging delivery system that is provided with my vehicle and that I can only plug into the garage outlet and not hardwired.
2. I understand that the HOA provides electricity to the garages as part of the monthly HOA assessment.
3. I agree to the additional \$50 per month assessment fee to cover the cost to the HOA for using this privilege.
4. I understand that the level 1 charging delivery system is only 120 volts and must not exceed 12 amps by the charging circuit in my electric vehicle. Level 1 is limited to 4 miles an hour for charging per electric vehicle.
5. I understand that the power provided to the receptacles in my garage are part of a shared electric circuit by several garages on a 20 amp circuit breaker.
6. I understand that delivery of electricity for charging may be prevented if another electric vehicle is charging at the same time on the shared circuit. This allocation is controlled by the charging circuits in some electric vehicle models.
7. I understand that I am responsible for the electric circuits in my garage and they must maintained in proper order.
8. I understand that the electric vehicle charging delivery system must use a dedicated electrical socket in my garage and **CANNOT** be plugged into a power strip.
